/ READINESS CHECKLIST

DFARS 252.225-7052 readiness checklist

For small and midsize defense suppliers of motors, actuators and other parts that may contain NdFeB or SmCo magnets, tungsten or tantalum. Clause dated May 2024; upstream stages (mining, refining, separation) in scope from 1 January 2027. Checked 15 October 2026.

1. Scope

- [ ] We know which of our contracts and purchase orders include DFARS 252.225-7052, directly or by flow-down.
- [ ] We have a list of part numbers that may contain NdFeB or SmCo magnets, tungsten, or tantalum.
- [ ] For each of those parts, we know the direct supplier and, where possible, the magnet or metal maker behind it.
- [ ] Our contracts team has confirmed whether any exception may apply. (We have not assumed one.)

2. Records by stage

For each in-scope part, can you point to a dated document that names the facility and country for each stage?

- [ ] Mining of the ore or feedstock (including recycled feed)
- [ ] Separation and refining
- [ ] Metal and alloy making (melting)
- [ ] Final production of the magnet or metal part

> A declaration that covers only the magnet maker or finished part usually leaves the earlier stages open.

3. Quality of the documents

- [ ] Each document says which stage it covers, not just "origin".
- [ ] Each document is dated and still applies to the lots we ship.
- [ ] We know who issued each document and how to reach them.

- [ ] Where a supplier could not answer, we have recorded that and know who upstream can.

4. Readiness for customer questions

- [ ] We can answer a prime's or higher-tier customer's origin request for our top parts within a week.
- [ ] We know which parts have open questions, and what we have asked suppliers.
- [ ] We do not send drawings, controlled technical data or export-controlled information in these requests.
- [ ] Someone owns this internally (quality, purchasing or contracts) and reviews it when suppliers change.

Several unchecked boxes is normal today, especially in section 2. A **readiness call** takes about 20 minutes and helps you decide which parts to start with.

Lodeline provides supply-chain documentation and analysis, not legal advice or government certification. Applicability, exceptions, and acceptance depend on the contract and the responsible reviewer.
